

ADDENDUM #001 dated June 8, 2026
Request for Qualifications for Civil Engineering Services

This addendum intends to clarify the questions submitted through June 5, 2026.
Answers are in RED

- To whom should we address this qualifications package? **Perry County commissioners**
- How many hard copies need to be delivered? **If it is not addressed in RFQ, please submit three copies**
- Are front and back covers included in the page count? **No**
- How was the 33 to 38K square foot size for the new government center building determined? **We took the space we are currently using added for additional growth and also took some organizations that would like to move into this building and out of their space. It is a rough estimate at this point.** Have any other building details, such as the number of floors or passive solar heating strategies been established? **At this point, we have considered a two-story building and have not yet discussed the heating strategies**
- Is there a site already selected or prospective sites under consideration for the new government center? **As of this time, we are looking at two sites. One is a little more favorable, but until we get some directions from an engineer, as to the amount of space we need we have not decided.**
- Are there accessory uses, parking, storage, or other needs that are being considered for colocation at the same site as the new government center? **There, of course, will be parking for the entire government center. No other ancillary buildings at this point, but would like to have some space for growth and or expansion in the future something we do not have in our current situation.**
